The Spirit of Tomorrow

The unique car named "Spirit of Tomorrow" by its designer tells a story of H.C. Chrysler and GM in the future. H.B. "Boss" Chrysler (1871-1963) faced mechanical challenges from his Project Line working shop on remarkable designs from street to house, logging trucks, from street to house that roared once an hour on a paved racetrack that he designed.

Completed in 1940, the Spirit of Tomorrow car has travelled far and wide, attracting many comments. In 1967 Chrysler restored the car and installed a Ford 289 F.A. engine. It weighs 1400 kg (3000 lbs) and has a top speed of about 180 km/h (110 mph).

Benny Oliver drove the first car shown behind the glass in the Project Line House about 1915. Photo by...

GOLD

Cleaning bedrock on Goldpan Creek, Cassiar District.

mines with gold to form
mixture). Miners placed
the bottom of sluice boxes
with gold and gravel passed.
The gold and gravel passed,
and amalgamated with the
mercury in the sluice box.
The mercury was then separated by
boiling with water and steam
gas, leaving behind only
the gold. This was an important
step in recovering fine gold. The
mercury was recovered for later use.

Free Miner's Certificate

Governor James Douglas issued a proclamation in 1858 requiring all miners to purchase a licence. The licence provided both revenue and a means for regulating the miners' activities. The licensing system has been modified, but still remains in force today.

Platinum
Platinum is occasionally found
in placer deposits, such as
those of the Yukon. The first
specimens were sent
to the Smithsonian by
James W. Weldon in 1846.

Collected at
Big Mineral Mine,
near Stewart,
44 grams (1.4 oz. troy).

Crystalline Gold
Crystalline gold is very rare.
The first specimen was
discovered near Zerkow,
Yamalo-Nenets Autonomous
District, in 1937.
